Documentation of Dataset Outfit Price Prediction
I.   The size (i.e., number of samples and number of features) of the dataset.

We take over 300 data.

The features of our dataset are ---

1.   Gender
2.   Style
3.   Type
4.   Size
5.   Fabric
6.   Brand
7.   Price Range

Description of features with their units.

First, we take string type data for all of our features. Then we encoded through label encoder to encode string to numeric. In addition, we took numeric type data for other columns.

Citation of the websites from where data has been collected
